

## Unit 3: Homework

1. Create an ER model for modeling all the entities and the relations of the MSDS program. The model should account for the following:
  - a. Capturing entities to hold the student info
  - b. Capturing entities to hold the instructor info
  - c. Relations to hold the associations between instructors , courses , sections and students
  - d. Additional information to model your previous classes and ongoing classes , model your payment /account information.

Create the ER model using MySQL workbench and submit the pdf file.
